COMMON LUNG CANCER SYMPTOMS

Persistent
cough

Coughing up
blood

Chest
pain

Shortness
of breath

Unexplained
weight loss

See your doctor if these symptoms persist. Experiencing these symptoms doesn't necessarily mean that you have lung cancer.

DO YOU KNOW YOUR BIOMARKER STATUS?

Biomarkers reveal distinct traits of
your lung cancer.

Certain **biomarkers** may drive your
Non-Small Cell Lung Cancer (NSCLC)
to grow and spread.

Approximately

45% of

Asian NSCLC patients have an **EGFR
biomarker** - a genetic mutation in the
Epidermal Growth Factor Receptor.

Testing for biomarkers helps guide your doctors in
determining the most appropriate treatment plan
for your type of lung cancer.

**If you are diagnosed with NSCLC,
ask your doctor
about biomarker testing.**
